

Opportunities Created By the Crisis

The two characters shown portray either Microsoft or SCO. SCO is a story unto itself. They claimed in court that IBM and Linux stole code from Unix but IBM and Novell first showed (in court) that SCO does not own the rights to Unix to start with before showing that Linux contains nothing from Unix and that, in fact, Unix contains Linux code. Novell happen to hold the rights to Unix.

In the mean time SCO has cost the computer world 100's of millions of dollars in litigation, even with back door funding from Microsoft (refuted but shown in court documents that MS did fund SCO as part of the FUD war against Linux).

I believe we've set up everything we need. We've spun off the "main" company -- the one involved in all the litigation and with all the debt -- into a shell corporation that now exists in name only, which took out a large loan from SCO Financial Fiduciary Largesse & Wagers.

Since SCO is unable to repay the loan -- especially when you consider the thoroughly unreasonable terms of the loan itself -- SCOFFL&W has taken possession of all its assets and debts.

And because SCOFFL&W had no capital to begin with...

It is now in extreme financial peril.

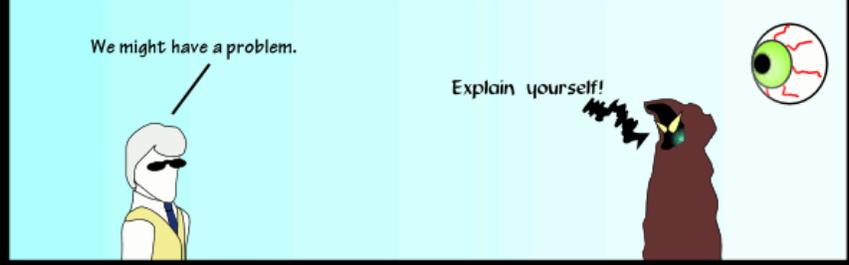

Call the Federal Government. Tell them to give us ridiculously large sums of money.

We might have a problem.

Explain yourself!

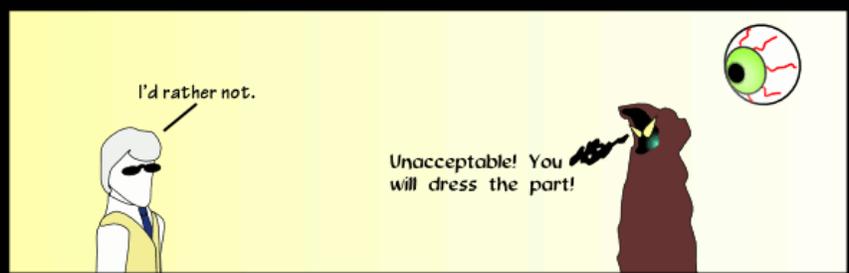

It appears the Federal Government has doubts as to whether or not we are a legitimate financial institution. Apparently it doesn't want to fund the illegitimate ones.

You must do everything in your power to convince the Federal Government that we are legitimate!

I will do what I --

Don't forget to dress the part.

I'd rather not.

Unacceptable! You will dress the part!

Welcome to our bank.

Later that day
