

5 October 2008

Gentlemen,

This has been sent to all branch secretaries of the Australasian Institute of Mining and Metallurgy by me today!

Colin C. Brooks

Dear People,

Recently the AusIMM Central Services issued a nonsense, in our Institute's name, "Carbon Pollution Reduction Scheme Submission (September 2008)."

As there is so little relevant real science, published and peer-reviewed, available to our members, attached please find, from CERN, Geneva, Switzerland, Jasper Kirby's "Cosmic Rays and Climate" with its 170 relevant references to provide those members interested to review this (dispassionately) with some alternate points of view [see *Part 2 of "Cosmic Rays and Climate"*]. It is not 100% one-sided. Rather it is scientific.

Like it or not, this is no longer urgent as the current economic turmoil will prevent our politicians, economists and lawyers from sinking the ship by diverting huge amounts of money to curbing CO2 emissions.

Would you be so kind as to forward it to those members interested.

Yours faithfully,

Colin C Brooks (BSc with majors in geology and physics, member since 1955)
